Miami, FL | (305) 397 4008 | josearosemena2@gmail.com | <https://www.linkedin.com/in/jose-arosemena>

DevOps Engineer

DevOps / Site Reliability Engineer with experience building and supporting cloud infrastructure automation, CI/CD pipelines, and operational tooling across AWS environments. Skilled in Python, PowerShell, GitLab CI/CD, and serverless infrastructure with hands-on experience in incident response, monitoring, troubleshooting, and infrastructure reliability. Experienced supporting multi-cloud environments and collaborating across engineering teams to improve scalability, operational efficiency, and system resilience.

Key Skills

Python | SQL | Boto3 | AWS CLI | AWS CloudFormation | AWS Lambda | CI/CD | Git (GitLab and GitHub) | Azure | GCP | Serverless Architecture | Cloud Automation | Infrastructure as Code (IaC) | AWS VPC | JavaScript | Splunk | Spanish (Fluent) | Exposure to Terraform, Kubernetes, Helm

Professional Experience

Asurion, Nashville, TN

September 2022 - November 2024

DevOps Engineer

Designed and supported serverless automation solutions using Python, Boto3, AWS Lambda, API Gateway, DynamoDB, and GitLab CI/CD to streamline operational workflows and improve infrastructure reliability across enterprise AWS environments.

- Built automated AWS resource cleanup workflows using Python and Boto3 to identify and remove idle infrastructure, reducing unnecessary cloud spend and improving operational efficiency.
- Developed an event-driven infrastructure monitoring and incident management pipeline integrating AWS EventBridge, Lambda, BigPanda, ServiceNow, and internal databases to improve operational visibility, automate alerting workflows, and accelerate incident response across enterprise AWS environments.
- Built automation to validate and remediate AWS load balancer logging configurations across 200+ AWS accounts using Python, Lambda, and S3 integrations, improving compliance and deployment consistency.
- Developed reusable automation and API-driven workflows to improve developer operations and infrastructure governance:
 - Automated GitLab-to-GitHub repository mirroring using GitLab and GitHub APIs, improving repository redundancy and CI/CD resiliency
 - Integrated ServiceNow approval workflows with AWS DynamoDB and API Gateway to automate cloud resource tagging and governance processes
- Supported production cloud environments across AWS, Azure, and GCP by troubleshooting networking, IAM, infrastructure, and system reliability issues affecting internal engineering teams and business operations.
- Implemented monitoring, logging, and alerting improvements using AWS CloudWatch and operational tooling to improve visibility into serverless infrastructure and automation workflows.
- Participated in troubleshooting and operational support activities for business-critical infrastructure automation and cloud services in production environments.

Asurion, Nashville, TN

May 2022 - August 2022

Software Engineer Intern

Supported the development and integration of automated workflows to improve operational efficiency and infrastructure management.

- Implemented Proof-of-Concept automated workflows in BigPanda using GitHub Actions and Python.
- Assisted in retagging enterprise servers for accurate server inventory management using PowerShell.

Certifications

AWS Certified Solutions Architect (Associate) | AWS Certified Cloud Practitioner

Education

Bachelor of Science, BS, in Computer Science

Florida International University, Miami, FL

May 2019 - May 2022
